

**Engineering Protection in
Multi-Mode Superconducting Circuits**

by

Eli J. Weissler

B.S., Physics, Harvey Mudd College, 2019

M.S., Electrical Engineering, University of Colorado Boulder, 2024

A thesis submitted to the

Faculty of the Graduate School of the

University of Colorado in partial fulfillment

of the requirements for the degree of

Doctor of Philosophy

Department of Electrical, Computer, and Energy Engineering

2026

Committee Members:

Josh Combes, Chair

András Gyenis, Co-Chair

Scott Glancy

Florent Lecocq

Marco Nicotra

Daniel Slichter

Weissler, Eli J. (Ph.D., Electrical Engineering)

Engineering Protection in Multi-Mode Superconducting Circuits

Thesis directed by Prof. Josh Combes

Chapter 1

Introduction

Figure 1.1: Test figure for this chapter.

Figure 1.2: Test circuit figure for this chapter.

People love quantum computing I'm focused on an aspect of it.

Background is stuff that I don't want to explain to people in the later chapters. Superconducting basics. Dressed basis two qubit gates, stabilizers for error correcting codes, basic circuit quantization using the devoret recipe.

Explaining dispersive readout, voltage control on transmon, flux tuning, etc. The basics. Transmission lines.

Discuss protection vs. error correction.

Noise estimates.

Testing my bibliography here [1].

Testing approximation for circuit quantum electrodynamics (cQED) and quantum error correction (QEC)

- 1.1 Quantum Computing
- 1.2 Circuit Quantum Electrodynamics (cQED or Circuit QED)
 - 1.2.1 Superconductivity
 - 1.2.2 LC Resonator
 - 1.2.3 Transmission Lines
 - 1.2.4 Basic Circuit Quantization
- 1.3 Common Superconducting Qubits and Operations
 - 1.3.1 Cooper Pair Box & Transmon
 - 1.3.2 Fluxonium
 - 1.3.3 Single-Qubit Gates
 - 1.3.4 Two-Qubit Gates
 - 1.3.5 Dispersive Readout
- 1.4 Numerical Modeling of Circuit QED Systems
 - 1.4.1 Finite Difference & Spectral Methods
 - 1.4.2 Multi-Mode & Composite Systems
- 1.5 Protecting Quantum Information from Noise
 - 1.5.1 Noise Filtering vs. Error Protection vs. Error Correction
 - 1.5.2 Protected Qubits and Estimating Lifetimes
 - 1.5.3 Quantum Error Correction (QEC)
 - 1.5.4 Noise Filtering in Circuit QED

Chapter 2

Automated Mode Separation and Circuit Quantization

Figure 2.1: Test figure for this chapter.

Figure 2.2: Test circuit figure for this chapter.

Chapter 3

Matrix Free Methods for Composite Systems

Figure 3.1: Test figure for this chapter.

Figure 3.2: Test circuit figure for this chapter.

Chapter 4

Circuit Enumeration

Figure 4.1: Test figure for this chapter.

Figure 4.2: Test circuit figure for this chapter.

Chapter 5

Two-Qubit Gates for the Soft $0 - \pi$ Qubit

Figure 5.1: Test figure for this chapter.

Figure 5.2: Test circuit figure for this chapter.

Chapter 6

$\cos M\varphi$ Qudits and Rotor Codes

Figure 6.1: Test figure for this chapter.

Figure 6.2: Test circuit figure for this chapter.

Glossary

cQED circuit quantum electrodynamics

QEC quantum error correction

Appendix A

Fun animal facts

Figure A.1: Test figure for this chapter.

Figure A.2: Test circuit figure for this chapter.

About appendices: Each appendix follow the same page-numbering rules as a regular chapter; the first page of a (multi-page) appendix is not numbered. Here are some facts about dogs!

- (1) Dalmatians are born without spots! They are born with plain white coats with their first spots appearing after they are 1week old.
- (2) Dogs sweat through their foot pads to help keep them cool. They also keep cool by panting.
- (3) Greyhounds are the world's fastest dogs with the ability to reach up to 45 mph.
- (4) Every dog has a unique nose print with no two alike.

- (5) The Basenji, an African wolf dog, does not bark in a normal way but may yodel or scream when excited!
- (6) Snoopy, from Charles M. Schultz's "Peanuts" comic strip, is a beagle.
- (7) A dog's sense of smell is 1000 times greater than a human!
- (8) Nine percent of dog owners will have a birthday party for their pet.
- (9) Dogs have 28 baby teeth and 42 permanent teeth.

And here are some other animal facts:

- (1) Fleas can jump 350 times its body length.
- (2) Hummingbirds are the only birds that can fly backwards.
- (3) Crocodiles cannot stick their tongue out.
- (4) Starfish do not have a brain.
- (5) Slugs have 4 noses.
- (6) Only female mosquitoes bite.
- (7) Polar bear skin is black!
- (8) The only mammal capable of flight is the bat.
- (9) A newborn kangaroo is the size of a lima bean.

I took these facts from animalmedical.org, which was the first Google search result for "list of fun facts about animals".

Appendix B

Ode to Spot

Figure B.1: Test figure for this chapter.

Figure B.2: Test circuit figure for this chapter.

(Data, Stardate 1403827) (A one-page chapter — page must be numbered!) Throughout the ages, from Keats to Giorchamo, poets have composed “odes” to individuals who have had a profound effect upon their lives. In keeping with that tradition I have written my next poem . . . in honor of my cat. I call it. . . Ode. . . to Spot. (Shot of Geordi and Worf in audience, looking mystified at each other.)

Felus cattus, is your taxonomic nomenclature
 an endothermic quadruped, carnivorous by nature?
 Your visual, olfactory, and auditory senses
 contribute to your hunting skills, and natural defenses.
 I find myself intrigued by your sub-vocal oscillations,

a singular development of cat communications
that obviates your basic hedonistic predilection
for a rhythmic stroking of your fur to demonstrate affection.
A tail is quite essential for your acrobatic talents;
you would not be so agile if you lacked its counterbalance.
And when not being utilized to aid in locomotion,
It often serves to illustrate the state of your emotion.

(Commander Riker begins to applaud, until a glance from Counselor Troi brings him to a halt.)

Commander Riker, you have anticipated my denouement. However, the sentiment is appreciated. I
will continue.

O Spot, the complex levels of behavior you display
connote a fairly well-developed cognitive array.
And though you are not sentient, Spot, and do not comprehend
I nonetheless consider you a true and valued friend.
